

PET FOOD FOR PROFESSIONAL USERS

## NO ARTIFICIAL PRESERVATIVE

Although if they are permitted by law, we chose not to add any additives in the production process, such as synthetic preservatives. The freshness and nutritional characteristics are preserved by advanced systems of production and by the use of raw materials that, thanks to their antioxidant characteristics, can preserve foods in a natural way.

## CRUELTY FREE

We can be proud of being the first company in Sicily and one of the first ones in Italy in this sector, to have received the environmental certification (ISO 14001), which is synonymous of a special sensitivity to the environment and animals. In addition, to prove an increased attention to animal welfare, our company does not make nor commission useless animal testing.

## NO OGM

Our animals deserve all the available quality and genuineness, so we guarantee the provenance of all the ingredients and we use only raw materials that do not contain genetically modified organisms and that meets our strict standards of quality.

With more than 40 years of experience in pet nutrition, Adragna Pet Food has always been offering high quality food for dogs and cats.

“We are what we eat” is its ancient motto; all the products of the Breeder Professional line are designed and manufactured to ensure the complete satisfaction of the nutritional needs of dogs of different sizes and at different ages and stages of life.

All the various steps leading to the creation of Breeder Professional products are therefore very important and can be resumed as follows:

- Deep study of the different needs of dogs for a correct formulation of the products;
- Careful selection of raw materials, selecting qualified suppliers and conducting rigorous analysis;
- Use of technologically advanced production facilities.

Specifically:

- Extrusion process able to perform a complete gelatinization of starch, fundamental to ensure a high digestibility of the products;
- Introduction of liquid ingredients through the innovative “vacuum” system in order to allow the complete absorption of fats without damaging the same;
- Management of production based on orders received from customers and not on the stock to allow the delivery of “fresh” products with a long expiring date;
- Use of highly skilled and motivated staff to better respond to the needs and requirements of customers.

All stages are subject ,more than to the compliance with national and European rules, to the strict **UNI EN ISO 9001** quality system, with the research of a continuous improvement. This is the driving philosophy of the company for every decision.

# INGREDIENTS

The healthy growth and development of a dog depend on a diet which should be targeted and effective since the first months of its life. This is the reason why Adragna devoted many years to the research and development of a new range of quality products, able to satisfy the specific needs of our four-legged friends, regardless of their age, weight, breed, activity level or specific needs.

The products formulated by Adragna Pet Food therefore include the best raw materials and high quality substances in order to guarantee high digestibility and palatability.
